Date : 20 April 2017 (Thursday)

Time : 10.00 am

Venue : Al-Dinawari Seminar Hall, T02, Faculty of Biosciences & Medical Engineering, UTM Johor Bahru

Title : Computing Biology Of The Future

We appreciate your cooperation in making this event educational and enlightening for the whole University's community.

Your presence in this event would be much appreciated. For UTM staff, your attendance will be recorded in UTMSmile system.

Abstract

As progress of conventional sciences into data-driven sciences, biology is no exception with future research existing upon collaborations between "dry" and "wet" biologists. New researchers will need to adapt to the data-driven nature of the future disciplines, and the training of future biologist must reflect these paradigm shift. The presentation will highlight the issues of integration into all levels of biological sciences, life and health sciences. Those who embark on career path into research and academia as well as the pertinent stakeholders need to be aware about these shifts in order to realize the full potential of this new frontier in biological research
